“Data Transformation, Modeling & Visualization with Power BI”

Bike Stations Sharing Data

Data Cleaning & Transformation:

The screenshot shows the Power BI Desktop interface with a data table named 'Bike Stations Sharing Data'. The table has columns: status, Contract Name, Bike Stands, Available Bike Stands, Available Bikes, and Last Update. A 'Change Type with Locale' dialog box is open, allowing the user to change the data type and select the locale of origin. The dialog box shows 'Date/Time' as the selected data type and 'English (United States)' as the selected locale. The 'Sample input values' section shows dates from Tuesday, March 29, 2016. The 'APPLIED STEPS' pane on the right shows the sequence of transformations: Source, Navigation, Promoted Headers, Changed Type, Removed Columns, and Renamed Columns.

The screenshot shows the Power BI Desktop interface with a data table named 'Bike Stations Sharing Data'. The table has columns: status, Contract Name, Bike Stands, Available Bike Stands, Available Bikes, and Last Update. A 'Split Column by Delimiter' dialog box is open, allowing the user to specify the delimiter used to split the text column. The dialog box shows 'Comma' as the selected delimiter and 'Each occurrence of the delimiter' as the selected split option. The 'Advanced options' section shows 'Quote Character' as ' ' and 'Split using special characters' as unchecked. The 'APPLIED STEPS' pane on the right shows the sequence of transformations: Source, Navigation, Promoted Headers, Changed Type, Removed Columns, Renamed Columns, and Changed Type with Locale.

Power Query Editor interface showing a query named "Bike Stations Sharing Data". The query formula is: `Table.TransformColumns(#"Uppercased Text",{"City Name", Text.Proper, type text})`. The data table has columns: status, City Name, Total Bike Stands, Available Bike Stands, Available Bikes, and Last Update. The status column shows 100% Valid, 0% Error, and 0% Empty. The City Name column shows 100% Valid, 0% Error, and 0% Empty. The Total Bike Stands column shows 100% Valid, 0% Error, and 0% Empty. The Available Bike Stands column shows 100% Valid, 0% Error, and 0% Empty. The Available Bikes column shows 100% Valid, 0% Error, and 0% Empty. The Last Update column shows 100% Valid, 0% Error, and 0% Empty. The data rows show various bike stations with their status, city name, and last update date.

Query Settings: Name: Bike Stations Sharing Data. All Properties.

APPLIED STEPS: Source, Navigation, Promoted Headers, Changed Type, Removed Columns, Renamed Columns, Changed Type with Locale, Split Column by Delimiter, Changed Type1, Renamed Columns1, Filtered Rows, Renamed Columns2, Filtered Rows1, Renamed Columns3, Uppercased Text, Capitalized Each Word (highlighted with a red arrow).

Power Query Editor interface showing a query named "Fact_Bike Stations Sharin...". The query formula is: `Table.SelectRows(#"Replaced Value", each true)`. The data table has columns: Station Id, Station name, 1.2 Latitude, 1.2 Longitude, banking, bonus, and sta. The status column shows 100% Valid, 0% Error, and 0% Empty. The Station name column shows 100% Valid, 0% Error, and 0% Empty. The 1.2 Latitude column shows 100% Valid, 0% Error, and 0% Empty. The 1.2 Longitude column shows 100% Valid, 0% Error, and 0% Empty. The banking column shows 100% Valid, 0% Error, and 0% Empty. The bonus column shows 100% Valid, 0% Error, and 0% Empty. The sta column shows 100% Valid, 0% Error, and 0% Empty. The data rows show various bike stations with their status, station name, latitude, longitude, banking, bonus, and station ID.
